| | (Time: 2½ hours) | E E |
|----------|--|------|
| | Total Marks: 75 | |
| N. B.: | (1) <u>All</u> questions are <u>compulsory</u>. (2) Make <u>suitable assumptions</u> wherever necessary and <u>state the assumptions</u> made. (3) Answers to the <u>same question</u> must be <u>written together</u>. (4) Numbers to the <u>right</u> indicate <u>marks</u>. (5) Draw <u>neat labeled diagrams</u> wherever <u>necessary</u>. (6) Use of <u>Non-programmable</u> calculators is <u>allowed</u>. | |
| 1. | Attempt <u>any three</u> of the following: | 15 |
| a. | Write the disadvantages of file processing system. | |
| b. | Discuss any two applications where database management system can be used. | \$0, |
| c. | Write a short note on business rules. | |
| d. | What is the importance of data model? | |
| e. | Explain the concept of weak entity set. | |
| f. | Write various symbols and their meaning used to draw ER diagram. | |
| 2. | Attempt <u>any three</u> of the following: | 15 |
| a. | What do you mean by decomposition? Write the desirable properties of decomposition. | |
| b. | Compare BCNF and 3NF. | |
| c. | List aggregate functions of relational algebra. Explain with example. | |
| d. | Explain the following relational algebra operations. 1. Rename 2. Cartesian product | |
| e. f. | Write a formal definition of domain relational calculus. Explain with example. Write a short note on tuple relational calculus. | |
| 3. | Attempt <u>any three</u> of the following: | 15 |
| a. | Write a short note on views. | |
| b. | Discuss the importance of triggers in SQL. | |
| c. | What do you mean by integrity constraint? Explain with example. | |
| d. | List various set operations of SQL. Explain any two with example. | |
| e. | Consider the schema where the primary keys are underlined. | |
| 600 | employees (E <u>id</u> , name, address,hire_date,birth_date) | |
| TO A | department (dept_id, name, year_of_establishment) | |
| 334 | emp_dept (<u>E_id</u> , <u>dept_id</u> , from_date,to_date) | |
| \$ 45°C | salaries (E_id, salary,month,year) | |
| 000 | Construct the following SQL queries for this relational database. | |
| | 1. List all the employees of IT department. | |
| X O O | 2. Delete employee whose name is 'ABC'. | |
| 222 | 3. List all departments in which at least one employee gets salary > 50000.4. List all the departments that established in the year 2000. | |
| | 5. Update the salary of employee to 20000 whose id is 'E001' for April 2018. | |
| f. | Write SQL DDL corresponding to the schema in Q.3 e. Make any reasonable | |
| 8700 | assumptions about data types, and be sure to declare primary and foreign keys. | |
| | assumptions about that types, and be bare to declare printary and foreign keys. | |
| 0,00 | | |

| 4. | Attempt an | v three o | f the fo | llowing: |
|----|------------|-------------|-----------|-----------------------|
| т. | Aucinpuan | y iiii ee o | '1 UIC IC | /110 W 111 2 • |

- a. Discuss ACID properties.
- b. Draw state diagram of transaction. Explain in short.
- c. Explain the timestamp-ordering protocol.
- d. Write a note on conflict serializability.
- e. What is deadlock? Explain deadlock prevention.
- f. What do you mean by concurrent execution? Write the advantages of the same.

5. Attempt <u>any three</u> of the following:

- a. What is implicit cursor? Write implicit cursor attribute.
- b. With example explain the conditional control in PL/SQL.
- c. Write a PL/SQL function that returns the factorial of a number.
- d. What is package in PL/SQL? Explain with example.
- e. What is a procedure/function? Differentiate between procedure and function.
- f. What is exception? Explain exception handling in PL/SQL.
